

Our FIVE e-bikes and a cargo trailer

The **'Tourer'** is an easy access step-through model suitable for tarmac roads and gravel tracks. It comes with 9 speed derailleurs gears, suspension, Bosch electrical power, incorporated lights and 2 large pannier bags.

The **'Compact'** is an easy access step-through model suitable for tarmac roads and gravel tracks with features that ease transport and storage. Adjustable saddle and handlebar heights allow for a variety of cyclist size. It comes with Bosch electrical power, incorporated lights, hub gears and a small pannier bag.

The **'Cyclone'** is a cross bar (leg-over!) model designed for both paved roads and gravel off-road tracks; BUT it is not a mountain bike! It comes with Shimano electrical power, 9 speed derailleurs gears and two large pannier bags

The **'Electron'** is essentially a step-through town bike that is also suitable for smoother gravel off-road cycle tracks. It comes with Shimano electrical power, 8 speed hub gears, integrated lights and two large pannier bags

The **'Gocycle GX'** is an interesting eccentricity! It is essentially a commuting bike suitable for paved roads and urban cycling routes. It is lighter than most ebikes and folds for ease of carriage and storage. Power settings are controlled through blue-tooth connection to a mobile phone app.

The **'Nomad'** trailer can carry up to 50kg of goods and can be towed by all our bikes above other than the folding Gocycle model. Great for the weekly shop or a weekend camping expedition
